Data Theis cleaning

mahdi Babaloo

2022-10-04

Data Cleaning for year 98

First, we empty the entire memory. Then we upload the required packages and libraries.

```
#remove all
rm(list=ls())

#Package_installation
# install.packages("dplyr")
library("dplyr")
# install.packages("tidyverse")
library("tidyverse")
# install.packages("stargazer")
library("stargazer")
# install.packages("haven")
library(haven)
```

Data loading

This section we load r data.

```
#data_load
load("E:/proposal/data/98.RData")
```

Clear not necessary data

```
rm("U98P3S01","U98P3S02","U98P3S04","U98P3S05","U98P3S06","U98P3S07","U98P3S08",
   "U98P3S09","U98P3S10","U98P3S11","U98P3S14"
   ,"U98P4S04","R98P1","R98P2","R98P3S01","R98P3S02",
   "R98P3S04","R98P3S05","R98P3S06","R98P3S07","R98P3S08","R98P3S03",
   "R98P3S09","R98P3S10","R98P3S11","R98P3S12","R98P3S14","R98P4S01",
   "R98P4S02","R98P4S03","R98P4S04","R98Data","U98P2")
```

Data cleaning

Division of provinces

```
Province <- c(Markazi="00", Gilan="01", Mazandaran="02", AzarbaijanSharghi="03", AzarbaijanGharbi="04",

Combinig Data and save clean data

The combing data set with expenditure and income family and add month in data.

```
 class(U98P1$Address) = "double"
Data<-left_join(
  x=Data,
  y=data,
  by=c("Address")
)
Data<-left_join(
  x=Data,
  y=U98Data,
  by=c("Address")
)
# saving data in stata file

#write_dta(Data,"98.dta")
```

The same work on 1399 data.
